DEPARTMENT OF THE ARMY JUSTIFICATION OF ESTIMATES FY 1994

APPROPRIATION LANGUAGE

MILITARY CONSTRUCTION, ARMY RESERVE

For construction, acquisition, expansion, rehabilitation, and conversion of facilities for the training and administration of the Army Reserve as authorized by Chapter 133 of Title 10, United States Code and military construction Authorization Acts, \$82,233,000 (\$31,500,000) (1) (2), to remain available until September 30, 1998 (1997) (1) (2).

- (1) Insertion of FY 1994 request.
- (2) Deletion of FY 1993 appropriation.

MILITARY CONSTRUCTION, ARMY RESERVE FY 1994

SPECIAL PROGRAM CONSIDERATIONS

Pollution Abatement

The military construction projects proposed in this program will be designed to meet environmental standards. Military construction projects proposed primarily for abatement of existing pollution problems at installations have been reviewed to ensure that corrective design is accomplished in accordance with specific standards and criteria.

Energy Conservation

Military construction projects specifically for energy conservation at installations have been developed, reviewed, and selected with prioritization by energy savings per investment cost. Projects include improvements to existing facilities and utilities systems to upgrade design, eliminate waste, and install energy saving devices. Projects are designed for minimum energy consumption.

Flood Plain Management and Wetlands Protection

Proposed land acquisitions, disposals, and installation construction projects have been planned to allow the proper management of flood plains and the protection of wetlands by avoiding long and short term adverse degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Nos. 11988 and 11990.

Design for Accessibility of Physically Handicapped Personnel

In accordance with Public Law 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

Environmental Protection

In accordance with Section 102(2)(c) of the National Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the Military Construction Program.

SPECIAL PROGRAM CONSIDERATIONS

(continued)

Economic Analysis

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources.

Reserve Potential

The Reserve potential to meet and maintain authorized strengths of all Reserve flying/nonflying units in those areas in which these facilities are to be located has been reviewed. It has been determined, in coordination with all other Services having Reserve flying/nonflying units in these areas, that the number of units of the Reserve components of the Armed Forces presently located in those areas, and those which have been allocated to the areas for future activation, is not and will not be larger than the number that reasonably can be expected to be maintained at authorized strength considering the number of persons living in the areas who are qualified for membership in those Reserve units.

Preservation of Historical Sites and Structures

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object, or setting listed in the National Register of Historic Places, except as noted on DD Form 1391.

Use of Excess Schools and Other Buildings

Considerations were made to utilize available commercial or academic buildings but none were suitable except as identified by specific projects in this request.

Placement of Reserve Component Units in Local Communities

The Reserve manpower potential to meet and maintain authorized strengths of all Reserve units in the areas where units are to be located has been reviewed in accordance with the procedures described in DoD Directive 1225.7. It has been determined, in coordination with the other Military Departments

SPECIAL PROGRAM CONSIDERATIONS

(continued)

having Reserve units in the area, that the number of Reserve components presently located in the area, and those units having been allocated to this area for future activation, is not and shall not be larger than the number that reasonably may be maintained at authorized strength.

Facility Planning and Design Guide

Unless otherwise noted, the projects comply with the scope and design criteria prescribed in Part II of Military Handbook 1190, "Facility Planning and Design Guide."

Resolution Trust Corporation Real Estate Assets

In accordance with guidance contained in Senate Report 101-384, page 282, all fiscal year 1994 projects have been screened against the Resolution Trust Corporation's (RTC) Real Estate Asset Inventory.

Congressional Reporting Requirements

The following paragraph, titled "Maintenance and Repair of Real Property," is in response to the Senate Appropriations Committee requirement contained on page 24 (Non-MILCON Construction Activities) of the Report #100-200 and page 1006 (Non-MILCON Construction activities), Senate and House Conference Report #100-498.

10. DESCRIPTION OF PROPOSED CONSTRUCTION

Construct a new two-story training building for a Battle Projection Center (BPC). The building will be permanent construction with reinforced concrete grade beams on caisson foundations, concrete floor slabs, and brick veneer exterior walls to match the existing training building. It will include electrical systems, mechanical systems, raised computer floors, security alarm/intrustion detection, and remote/keypad access operated doors for physical security. Supporting facilities will include retaining wall, paving, site improvements, and extension of utilities to serve the project. Air Conditioning: 120 Tons

11. REQUIREMENT: 37,804 SF Adequate: 0 SF Substandard: 0 SF

PROJECT: Construct a new building at the existing U.S. Army Reserve Center for a Battle Projection Center (BPC). (New Mission) REQUIREMENT: This project provides a BPC with computer work stations, computer room, telecommunications, administrative, educational, storage, and support areas to train the commanders and staffs of over 800 units (totaling 4,000 officers) in the Second U.S. Army area. The BPC houses the equipment and staff to run Combined Arms Command-Training simulations that give commanders and their staffs high quality, cost effective training. It has three sets of Brigade/Battalion Battle Simulation equipment and one set of Corps Battle Simulation equipment (total 57 work stations, 20 minicomputers, and one mainframe computer). The BPC staff runs computer simulations transmitted over telephone lines to the training units, which remain at home station. This supplements traditional field exercises and makes effective use of available training time for USAR units. The project provides a permanent training complex for the organization, planning, execution, and control of these simulation

activities for all units the 87th Maneuver Area Command (MAC) supports. CURRENT SITUATION: The 87th MAC will receive four sets of battle simulation equipment over a period of three fiscal years, beginning in FY 1993. The 87th MAC is now filling the additional personnel positions authorized for the BPC's. There is insufficient facility space to permanently house this equipment, the personnel, and the operational functions of a BPC without degrading the other training missions of the 87th MAC. The first set of equipment (10 work stations and 5 minicomputers) will become operational in the existing training building as a temporary measure by displacing other elements, causing overcrowding until this project is complete. The Corps of Engineers has screened Resolution Trust Corporation properties and found three in Birmingham, AL., that are either too small or excesively large for this project's requirements. IMPACT IF NOT PROVIDED: The existing facility lacks the space to operate effectively as a permanent BPC. The simulation equipment would have to be located elsewhere, requiring new construction at that location. The attendant personnel turbulence would keep the simulation equipment either inoperative or operative at reduced efficiency for an extended period. The simulations will not be available to maintain training standards as constrained budgets reduce mass travel for traditional exercises.

12. SUPPLEMENTAL DATA:

10. DESCRIPTION OF PROPOSED CONSTRUCTION

Construction will be a single story, concrete slab-on-grade flooring, masonry and steel structure with protected membrane roof system complete with an integrated site development. Air Conditioning: 0 Tons

11. REQUIREMENT: 52,234 SF Adequate: 0 SF Substandard: 6,192 SF

PROJECT: Add to and alter the existing maintenance facility and construct new training center with storage space. (Current Mission)
REQUIREMENT: This facility will support and accommodate a support group headquarters, engineer battalion (-), and detachments from a United States Army Reserve Forces school and United States Army hospital with adequate administration space, unit and individual training areas and storage areas. Included in the project is an assembly hall, learning center, library, classrooms, instructor classrooms, arms vault with arms maintenance area, kitchen and dining facility, supply storage and parking for privately owned vehicles. The maintenance facility will support authorized Organizational Maintenance Shop (OMS) services, Direct Support-General Support (DS-GS) and Area Maintenance Support Activity (AMSA) with 13 maintenance bays, maintenance administration space, tools and parts storage, battery storage and charging, flammable material storage, overhead lifting capabilities and an expanded Military Equipment Park (MEP).

CURRENT SITUATION: The existing facilities are overcrowded and inadequate for the authorized troop population. The existing training facility is situated in the vicinity of an environmentally impacted site which does not allow for expansion or alteration. Deficiencies include lack of provisions for the handicapped, insufficient unit and individual storage space when considering arctic conditions and insufficient administration

space. Storage space currently provided by the support installation is scheduled for demolition FY 92. The inadequacies in training and administration space, insufficient vehicle and maintenance facilities and inadequate supply and storage space adversely impact upon unit mission and training. The existing maintenance facility limits training and the units' ability to perform required maintenance services during periods of inclement weather. Adequate heating and ventilation do not support full utilization of the existing maintenance facility by unit personnel. Building number 45590, Ft Richardson, AK, 9,675 square feet, constructed in 1943, to be demolished in conjunction with this project. The Corps of Engineers has screened Resolution Trust Corporation (RTC) properties and found none available for this project. IMPACT IF NOT PROVIDED: Units will not be able to secure, store or maintain unit and individual equipment or conduct training to meet readiness and mobilization objectives. Without adequate maintenance facilities, equipment and vehicles will not be maintained properly.

10. DESCRIPTION OF PROPOSED CONSTRUCTION

Construct a 600-member USAR center with Organizational and Direct Support Maintenance Shop. The project will construct a two-story, split faced masonry structure with a reinforced concrete slab and a one story masonry structure on a reinforced concrete slab for the Organizational Maintenance Shop. Air Conditioning: 80 Tons

11. REQUIREMENT: 84,376 SF Adequate: 0 SF Substandard: 0 SF

PROJECT: Construct a 600-member USAR center and Organizational Maintenance Shop. (Current Mission)

REQUIREMENT: This project is required to provide adequate training facilities for HHC, 416th ENCOM, 416th TDA (AUG) and HSC, 863d EN BN. The new facility will satisfy the administrative, storage, classroom, training, assembly hall and kitchen requirements normally associated with reserve units. In addition, this facility will satisfy the special mission requirements of the 416th ENCOM for a drafting room, photo lab, map storage room, soils lab and classified work area. Special laboratory training space will be provided for the facilities for the performance of routine maintenance required at the unit level and the DS shop will support the Logistics Mission Performance Training Program of HSC, 863d EN BN.

CURRENT SITUATION: Current facilities in use are four overcrowded USAR centers with the HHC, 416th ENCOM and 416th FE TDA (AUG) located in a grossly inadequate facility. This facility provides approximately 50% of their authorized total space requirements and is critically short of administrative, storage, classroom and special training areas. The assembly hall is utilized for common administrative and classroom functions in addition to its normal uses. The classrooms, rifle range,

locker room and supply rooms have been converted to administrative space. There is no space available to conduct the special training functions of soils testing, drafting and photo laboratory operations. The Organizational Maintenance Shop has been converted to unit storage and military vans and land/sea containers are also utilized for unit storage. Privately Owned Vehicle parking is grossly inadequate, forcing unit members to park in the street, in adjacent lots or wherever space is available. The parking area for military vehicles is also severely limited. The HSC, 863d EN BN is housed in facilities that are grossly inadequate for the training mission of a combat engineer unit and the (DS) mission. Execution of this project not only provides improved facilities for the 3 units included, but also for another 19 units which will remain or backfill existing facilities. The Corps of Engineers has screened Resolution Trust Corporation (RTC) properties and found none available for this project.

IMPACT IF NOT PROVIDED: With the continued use of substandard facilities, the units will not be able to properly conduct training exercises and be prepared to meet their readiness and mobilization objectives. The lack of special training areas required by the units will continue to adversely impact on the skill qualifications of the soldiers.

10. DESCRIPTION OF PROPOSED CONSTRUCTION

Add a two-story training building and a one-story vehicle maintenance shop to the existing U.S. Army Reserve Center. The buildings are permanent construction with reinforced concrete foundations, concrete floor slabs, load-bearing masonry exterior walls, single-ply EPDM membrane over insulated steel deck on steel joists, mechanical systems, and electrical systems. Alter the existing training building for storage by changing interior partitions, erecting storage cages, and providing new mechanical systems. Demolish existing unit maintenance, Area Maintenance Support Activity, and storage buildings. Construct new piers, bulkheads, and boat berths. Demolish an existing pier and bulkhead. Air Conditioning: 38

11. REQUIREMENT: 39,007 SF Adequate: 0 SF Substandard: 11,453 SF

PROJECT: Add to and alter the existing U.S. Army Reserve Center (USARC) with Organizational Maintenance Shop (OMS) and Area Maintenance Support Activity (AMSA). (New Mission)

REQUIREMENT: This project will provide a 150-member training facility with administrative areas, classroom, library, learning center, assembly hall, arms vault, kitchen, and unit storage for one U.S. Army Reserve unit. The maintenance shop will provide space for training to accomplish organizational maintenance and for daily boat maintenance by the AMSA. The training building first floor and the maintenance building offices will be above the 100 year flood level. The berths will provide mooring space for boats operated by the unit. The project will also provide parking space for military and privately owned vehicles.

CURRENT SITUATION: The site and buildings are a former commercial boat yard purchased in 1972. Existing facilities include a training building,

Add/Alt US	ARC/OMS/AMSA (Marine)	CAR	94-00478

a storage building, a small house, and four small buildings used for unit maintenance and the AMSA. The center is deficient in administrative, educational, assembly, maintenance, and parking space. Unit members must park privately owned vehicles on narrow city streets because parking area is severely limited at the center. There is insufficient berthing space for the five new Landing Craft, Utility (LCU) 2000 series boats the unit is receiving for force modernization. The LCU 2000 boats are 29% longer and 45% wider than the LCU 1600 series boats previously fielded to the unit. Excavation of new berthing space and construction of new piers (650 LF) and bulkheads (1160 LF) are needed to comply with North Carolina guidelines on pier encroachment in navigable waters and to upgrade anchorage for the larger boats (174 FT long by 42 FT wide). Upgraded anchorage will enable boats to remain moored during a hurricane. This requires demolition of an existing bulkhead (460 LF) and pier (180 LF). The existing training building will be altered for unit and AMSA storage. The existing house, storage building, AMSA, and unit maintenance buildings will be demolished (10,740 SF). Acquisition of an additional 0.66 acres of adjacent land for this project is ongoing to comply with restrictions by the state on the filling of public waters and wetlands. The state will also require environmental mitigation of approximately 6 acres for loss or conversion of estuarine bottoms and for loss of wetlands. The boats and AMSA must relocate off site to a temporary leased facility during construction. The Corps of Engineers has screened Resolution Trust Corporation (RTC) properties and found none available for this project. IMPACT IF NOT PROVIDED: The site cannot support the five new boats being fielded to the unit without this project. Other commercial waterfront property is not readily available for acquisition by the USAR. Second U.S. Army examined alternate government-owned sites within North Carolina but found them to be unacceptable due to excessive development and dredging costs. The unit may have to relocate outside of the Second U.S. Army area (southeast United States). Relocation of the unit would disrupt mission capability of the unit for an extended period of time through the loss of personnel. Key personnel require years of experience to qualify to operate these boats.

This project will provide construction of a new two-story, splitfaced ribbed block masonry training building, a one story maintenance shop and one story metal siding storage facility. The project will include site development, private auto and military equipment parking and all utilities required to support the facilities. Air Conditioning: 119 Tons

11. REQUIREMENT: 155,542 SF Adequate: 0 SF Substandard: 0 SF

PROJECT: Construct an 800-member U.S. Army Reserve center, Organizational Maintenance Shop, Army Maintenance Support Activity (AMSA) and Direct Support/General Support (DS-GS) shop with privately owned vehicles (POV) and military equipment parking. (Current Mission)
REQUIREMENT: This facility will provide facilities support for six units

REQUIREMENT: This facility will provide facilities support for six units consisting of a U.S. Army Reserve Command headquarters, four maintenance units, a military police company and a medical group headquarters. The training facility will provide the required administrative space, small library, learning centers, arms vault, arms maintenance area, dining facilities, storage areas and assembly hall. The maintenance shop will provide equipment work bays, a supervisory office space, administrative area, tool and parts room, a battery storage and charging room and flammable storage area. Military equipment and POV parking will be provided.

CURRENT SITUATION: Units currently occupy two government owned USAR centers, two existing buildings at Fort Hayes and four leased facilities. These facilities are grossly overcrowded and do not provide sufficient administrative area, training space and equipment storage space for unit and individual equipment. The buildings are poorly insulated with outdated, inefficient heating plants which are expensive to operate. The

facilities provide minimal space for classrooms, storage of training manuals and other learning materials. Areas to conduct individual skill training are limited. Insufficient space has required the Army to lease off-site facilities to satisfy unit equipment and storage. A leased facility that provides 80,431 square feet will be eliminated upon completion of this project. The Corps of Engineers has screened Resolution Trust Corporation (RTC) properties and found none available for this project.

IMPACT IF NOT PROVIDED: The assigned units will continue to suffer from poor administrative support affecting the retention and recruiting of unit members. Insufficient classrooms and training facilities will severely impact on the individual skill qualifications of the individual soldier and the abilities of the units to train for wartime missions. Shortages of storage, maintenance and military equipment parking areas will continue to waste valuable training time traveling between the various locations off-site.

Construct a new two-story training building, a new one-story vehicle maintenance shop, and a new one-story warehouse. The buildings will be permanent construction with reinforced concrete foundations, concrete floor slabs, structural steel frames, masonry veneer exterior walls, standing seam metal roof with cementitious insulating deck, mechanical systems, and electrical systems. Supporting facilities will include demolition of existing structures, paving, fencing, wash rack with oil/water separator, site improvements, and extension of utilities to serve the project. Air Conditioning: 120 Tons.

11. REQUIREMENT: 101,856 SF Adequate: 0 SF Substandard: 44,796 SF

PROJECT: Construct a new U.S. Army Reserve Center (USARC) with Organizational and Direct Support Maintenance Shops, and a warehouse. (New Mission)

REQUIREMENT: This project will provide an 800-member training facility with administrative areas, classroom, library, learning center, assembly hall, arms vault, kitchen, and unit storage functions for five U.S. Army Reserve units. The maintenance shop will provide space to train maintenance personnel to accomplish organizational and direct support vehicle maintenance. The warehouse will provide space to receive, inventory, recover and store direct support repair parts. Additionally, there will be adequate parking for all military and privately owned vehicles.

CURRENT SITUATION: There are three U.S. Army Reserve centers on Fort Jackson, SC and a leased facility in Columbia, SC. The USAR Center at Forest Drive must be vacated because the property has been declared excess, and Fort Jackson is selling the property to private developers.

	USARC/OMS/I	s	CAR	94-01376

The USAR Center at Boyden Arbor Road is expanding in FY 1992 to accommodate eleven units, including six units displaced from the Forest Drive Center. A new USAR Center will be constructed on a 28.8 acre site at Fort Jackson (Jackson Boulevard) to accommodate three units displaced from the Forest Drive Center, one unit located in the overcrowded Lee Road Center, and one unit located in the substandard leased facility. The leased facility is an old truck terminal located ten miles from Fort Jackson. It is deficient in administrative, classroom, secure storage, and latrine space. There is no library or learning center to support There is no kitchen for food service personnel. The training. maintenance area is deficient in administrative, parts/tools storage, battery/flammable storage, and latrine space. A crane is not available in the building to lift heavy components. Equipment must be sent to the support installation for repair, although unit personnel could do it, if adequate facilities were available. Facility offsets are the Forest Drive center with OMS (19,607 SF) being disposed of as excess, and termination of the lease (25,162 SF). The Corps of Engineers has screened Resolution Trust Corporation (RTC) properties and found none available for this project.

IMPACT IF NOT PROVIDED: Severe overcrowding will continue in facilities at the Lee Road Center (Fort Jackson) and the leased facility in Columbia. Acquisition of temporary World War II buildings on Fort Jackson, or additional leased facilities, will be necessary to relocate 120th ARCOM units from the Forest Drive Center. The lack of adequate maintenance facilities will continue to delay repair of unit equipment.

This project will provide a new training center, maintenance shop and warehouse complete with an integrated site development. Construction will be a masonry and steel frame structure with a built-up roofing system.

Air Conditioning: 95 Tons

11. REQUIREMENT: 106,582 SF Adequate: 0 SF Substandard: 0 SF

PROJECT: Construct an 800-member USAR Center (USARC), Organizational Maintenance Shop (OMS), Area Maintenance Support Activity (AMSA) and Equipment Concentration Site (ECS) and warehouse. (Current Mission) REQUIREMENT: This facility will provide adequate training facilities for the assigned units and provide space to conduct training as an integral unit as well as the development of team work necessary for readiness. Unit personnel require functional and organizational space to conduct unit administration, training and storage of weapons, equipment and supplies. Assembly and classroom spaces are required to support the training missions of the various units. The standard design kitchen will provide hot meals to the soldiers during drill weekends as well as augment the training of the units cooks. Maintenance and hands-on type maintenance training will be conducted in the six-bay OMS and AMSA facility. Project provides sufficient parking areas for a military equipment park (MEP) and privately owned vehicles (POV).

CURRENT SITUATION: Current facilities are World War II barracks type buildings scheduled for demolition. The existing facilities do not meet minimum standards and requirements for a USAR Center, ECS storage and lack many of the required OSHA safety standards to function as a repair and maintenance facility. The Corps of Engineers has screened Resolution Trust Corporation (RTC) properties and found none available for this

Provide a lump sum for unspecified minor construction projects, not otherwise authorized by law, having a funded cost not to exceed \$400,000, including construction, alterations or conversion of permanent or temporary facilities, in accordance with 10 USC 2233 and 2233a.

11. <u>REQUIREMENT:</u> This program provides the means of accomplishing projects not exceeding \$400,000 that are not now identified, but which are anticipated to arise during FY 94 to satisfy critical, unforeseen mission requirements.

CURRENT SITUATION: During FY 94, the USAR will undergo numerous conversions and restructuring. Many urgent facilities requirements not now identified may arise, required on an urgent basis to support the arrival and redistribution of equipment. Unforeseen and urgent environmental requirements to meet the state and federal laws are also typical projects that must be accomplished.

IMPACT IF NOT PROVIDED: Deterioration of facilities beyond a useful life. Security problems, low retention, and lost training space are by products of poor facilities; increased utility costs and leases result. Lost flexibility to fund at this level insures greater project scope and costs later.
